Formula for interior and exterior angles of a regular polygon

Given the number of sides n of a regular polygon. The task is to find out the Interior angle and Exterior angle of the polygon. Examples: Input : $n = 6$ Output : Interior angle: 120 Exterior angle: 60 Input : $n = 10$ Output: Interior angle: 144 Exterior angle: 36 Interior angle: The angle between two adjacent sides inside the polygon is known as the Interior angle. Formula to find the Interior angle: Interior Angle = Exterior angle: The angle formed by any side of a polygon and the extension of its adjacent side is known as Exterior angle. Exterior angle = Program to find interior and exterior angles of a Regular Polygon: #include using namespace std; void findAngle(int n){ int interiorAngle, exteriorAngle; interiorAngle = (n - 2) * 180 / n; exteriorAngle = 360 / n; cout
